

My husband is a truck driver and we have XM Radios in all of our vehicles. He uses the Traffic and Weather bands on the XM Radio because he never loses the station. When you travel accross country it is very useful to have a station that doesn't go out of range. Trying to drive and find another station at the same time is very dangerous, especially in an 18 wheeler. Any thing can happen in a split second. Please reject NAB's petition 04-160. For my husbands sake and everyone on the road that uses the stations for business reasons, as well as the other users of the highway that may be in the path of someone trying to find a station instead of driving. Thank you.
